

James Dolan ①

$X \in$  5/5/19  
finite set  $X$  "sample space"

$$x_1, \dots, x_n \in X$$

$$p = \frac{1}{n} (\delta(x_1) + \dots + \delta(x_n))$$

$$X_n = \frac{X^n}{n!} \quad \text{n-element multisets in } X.$$

$\tilde{\text{Nat}}^X$ : objects are  $n \in \mathbb{N}^+$   
morphisms  $n \rightarrow m$   
iff  $m = kn$ .

(subsets of  $X$   
possibility  
monad  $\tilde{\text{Nat}}^X$   
is set  
of possibility  
distributions)

$$x \in \tilde{\text{FinSet}}$$

Multi subset of  $X$

Multi subsets

Slice category  $\text{FinSet}/X$

objects  $\{ \cdot \rightarrow X \}$

morphisms  $\begin{array}{ccc} \cdot & \xrightarrow{f} & \cdot \\ a \downarrow & & \downarrow b \\ & X & \end{array}$

( $\mathbb{N}$ -vector space over  $X$ .  
 $\mathbb{N}[X] = \{ \{x_i\} \}$ )

Spans

$$\text{FinSet}/X/Y \cong \text{FinSet}/X \times Y \cong \text{FinSet}/Y/X$$

↑ transpose ↓

Functor  $X_-$

$\tilde{\text{Nat}}^X \rightarrow \text{Fin-MultiSet}$

$$n \mapsto X_n$$

$$k:n \rightarrow m \mapsto X_n \xrightarrow{\text{cops}} X_{nk}$$

probability measures on  $X$ :

$$P_X = \text{colim}_{n \in \tilde{\text{Nat}}} X_n$$

$$P_X = \text{colim } X_-$$

Grp Finite Groupoids (Baez Dolan, Feynman diagrams)

James Dolan

② 5/5/19

Idempotent adjunction

Macquarie Uni PhD student  
Hardy Holly ??

Free abstract convex  
sets on a set  $X$   
is an algebra for probability  
Bloch sphere  $\star$  monad.

is a non-free algebra  
for this monad

Classical statistics  
are free algebras.

Analogy between  
probability dist  
and presheaves.

Probability  
monad

surjective  
 $\longrightarrow$

forget

$\{0, 1\}$   
remember  
 $\{0\} \{>0\}$

algebras

convex  
sets

Possibility distribution  
monad

algebras

sup semilattices  
without bottom

unit ball of  
a Banach space  
has a zero  
 $\&$  negatives

James Dolan

5/5/19

take  $X$  a ~~(finite?)~~ groupoid

Inverse of copy is division

take  $X$  with involution  $\ell$   
 & no fixed points  
 colimit of  
 $X \rtimes \ell$   
 is dividing by 2.

~~if  $\ell$  does have fixed points~~

if  $\ell$  does have fixed points  
 take homotopy colimit  
 this is a genuine groupoid  
 the fixed points gain an  
 involution  
 these become "half a point"

Groupoid cardinality

Analogy between  
 probability distributions  
 ~  
 presheaves

Frequentist uses  
 "random variables"

$\Rightarrow$  multisubsets

Bayesian uses  
 probability distributions.

colimit

fixed points

Quantum

parameter

imaginary time  
 temperature

quantum  $\leftrightarrow$  classical  
 stat mech

d-dim  
 lattice

d+1 dim  
 lattice

James Nolan
