

James Doh

① 12/6/19

(universal)
Problem Free, Com. quantale on x, y
 s.t. x, y are adjoint

14/6/19

unit $1 \rightarrow x \otimes y$ ω

counit $y \otimes x \rightarrow 1$ η

so $x \otimes y \leq 1 \leq y \otimes x$

ie. $xy = yx = 1$.

Non-commutative quantales:
 subsets are languages!
 believers may not be computable

Connection to quantum mechanics
 semilattice of subspaces of
 a Hilbert space

$$\mathbb{B}[x, y] / x^2 + y^2 = 1$$

believer:

closed under

14/6/19

This is "the tropical circle":

$$\mathbb{B}[x, y] / x^2 + y^2 = 1$$

In coming

$$\mathbb{K}[x, y] / x^2 + y^2 = 1$$

is trigonometric polynomials.

then $(\cos \theta, \sin \theta)$

is the "generic point on the circle".

[James Nolan]

① 14/6/14

"The constructs are the parts of the generic model"

Language	meaning
Algebra	Geometry
Synthetic category	Semantic category
Belief method	

The generic model

the generic x:

the generic y

Examples of the tropical circle

1) Over \mathbb{B} :

$$x^2 + y^2 = 1$$

has points $(1,0)$, $(0,1)$ & $(1,1)$.

2) Over $R = \{0, 1, 2, 3, 4, \dots\}$

~~xxxx~~ $+: = \min$
 $x := \text{sum at most } 4$
 $1 := 0$

$$\min(x^2, y^2) = 0$$

$$\min(x+x, y+y)$$
